

Survey Research and Design

Wrap-Up

William Marble

December 7, 2023

- ▶ My office hours: WEDNESDAY 9:30am-11:30am
- ▶ Liz's office hours: Wednesday 2pm-4pm
- ▶ R tutoring: TUESDAY 11am-12pm in the PORES suite
- ▶ Paper due 11:59pm on Dec. 20
- ▶ Please fill out course evaluation/send feedback to me

What You (Hopefully) Learned

- ▶ The ways that surveys are used in industry, government, and academia

What You (Hopefully) Learned

- ▶ The ways that surveys are used in industry, government, and academia
- ▶ A framework for reasoning about errors (and trade-offs) in surveys

What You (Hopefully) Learned

- ▶ The ways that surveys are used in industry, government, and academia
- ▶ A framework for reasoning about errors (and trade-offs) in surveys
- ▶ How to summarize, visualize, and interpret survey data using R

What You (Hopefully) Learned

- ▶ The ways that surveys are used in industry, government, and academia
- ▶ A framework for reasoning about errors (and trade-offs) in surveys
- ▶ How to summarize, visualize, and interpret survey data using R
- ▶ Why random sampling is the gold standard for surveys

What You (Hopefully) Learned

- ▶ The ways that surveys are used in industry, government, and academia
- ▶ A framework for reasoning about errors (and trade-offs) in surveys
- ▶ How to summarize, visualize, and interpret survey data using R
- ▶ Why random sampling is the gold standard for surveys
- ▶ Why “random samples” aren’t so random after all

What You (Hopefully) Learned

- ▶ The ways that surveys are used in industry, government, and academia
- ▶ A framework for reasoning about errors (and trade-offs) in surveys
- ▶ How to summarize, visualize, and interpret survey data using R
- ▶ Why random sampling is the gold standard for surveys
- ▶ Why “random samples” aren’t so random after all
- ▶ What can be done to adjust non-random samples — when it works and when it doesn’t

What You (Hopefully) Learned

- ▶ The ways that surveys are used in industry, government, and academia
- ▶ A framework for reasoning about errors (and trade-offs) in surveys
- ▶ How to summarize, visualize, and interpret survey data using R
- ▶ Why random sampling is the gold standard for surveys
- ▶ Why “random samples” aren’t so random after all
- ▶ What can be done to adjust non-random samples — when it works and when it doesn’t
- ▶ How to gather Census data to use as weighting targets (or for other purposes!)

What You (Hopefully) Learned

- ▶ How to design a questionnaire and avoid cognitive biases in survey responses

What You (Hopefully) Learned

- ▶ How to design a questionnaire and avoid cognitive biases in survey responses
- ▶ How to use a national-level survey to estimate public opinion in small subgroups

What You (Hopefully) Learned

- ▶ How to design a questionnaire and avoid cognitive biases in survey responses
- ▶ How to use a national-level survey to estimate public opinion in small subgroups
- ▶ How to embed an experiment in a survey to measure causal effects

What You (Hopefully) Learned

- ▶ How to design a questionnaire and avoid cognitive biases in survey responses
- ▶ How to use a national-level survey to estimate public opinion in small subgroups
- ▶ How to embed an experiment in a survey to measure causal effects
- ▶ Ways to measure ideology and other latent traits

What You (Hopefully) Learned

- ▶ How to design a questionnaire and avoid cognitive biases in survey responses
- ▶ How to use a national-level survey to estimate public opinion in small subgroups
- ▶ How to embed an experiment in a survey to measure causal effects
- ▶ Ways to measure ideology and other latent traits
- ▶ Methods for alleviating social desirability bias to measure sensitive attitudes and behaviors

What You (Hopefully) Learned

- ▶ How to design a questionnaire and avoid cognitive biases in survey responses
- ▶ How to use a national-level survey to estimate public opinion in small subgroups
- ▶ How to embed an experiment in a survey to measure causal effects
- ▶ Ways to measure ideology and other latent traits
- ▶ Methods for alleviating social desirability bias to measure sensitive attitudes and behaviors
- ▶ How to use panel surveys and rolling cross-section surveys for over-time description and causal inference

Most Importantly

You've learned the steps to translate a question into a research design to advance knowledge and how to **critically evaluate** empirical research.
